Q.25. What is forms in html? Define forms elements.

A. Forms are enclosed in the HTML <form> element. This element specifies the communication endpoint the data entered into the form should be submitted to, and the method of submitting the data, GET or POST.

Elements of HTML Forms:
Forms can be made up of standard graphical user interface elements:

- <text> — a simple text box that allows input of a single line of text.
- <email> – a type of <text> that requires a partially validated email address
- <number> – a type of <text> that requires a number
- <password> – similar to <text>, it is used for security purposes, in which the characters typed in are invisible or replaced by symbols
- <radio> — a radio button is used ti insert radio button in form, user can select only one from given options.
- <file> — a file select control for uploading a file
- <reset> — a reset button that, when activated, tells the browser to restore the values to their initial values.
- <submit> — a button that tells the browser to take action on the form (typically to send it to a server)
- <textarea> — much like the <text> input field except a <textarea> allows for multiple rows of data to be shown and entered
- <select> — a drop-down list that displays a list of items a user can select from

The sample image on the right shows most of these elements:

a text box asking for your name

Name	Value
Name	
Sex	○ Male ◉ Female
Eye color	green ▾
Check all that apply	☐ Over 6 feet tall ☐ Over 200 pounds
Describe your athletic ability:	
Enter my information	

html forms and elements examples image of forms

1. A pair of radio buttons asking you to pick your gender
